

Tullow Ghana Limited

SCOPE OF WORK

(Provision of 4D Marine Seismic Acquisition Support Services)

1. Background

Tullow Ghana Limited (TGL) operates two offshore oil and gas concessions, namely Jubilee and TEN.

Tullow Ghana Ltd will acquire a 4D monitor seismic survey over TEN with an envisaged commencement date in early April 2019, with an expected duration of approximately two (2) months. The baseline survey was acquired in 2014. The 2019 survey objectives are to confirm the sweep pattern and to improve understanding of reservoir connectivity.

To successfully execute this project, Tullow will be required to provide assurance services on the acquisition contractor; which in this case will be through a competent and experienced third-party contractor. This third-party contractor will be required to assure the works of the acquisition contractor and provide daily, weekly and monthly reports to Tullow.

2. Summary of Scope of Work

There is a requirement to undertake in-situ quality control (QC) services and integrity checking of all aspects of the seismic data acquisition including:

- a. In country management of the project
- b. Quality control of seismic data being acquired
- c. Navigation services
- d. Processing of the seismic data being undertaken in near-real time onboard the vessel, i.e. onboard processing (OBP)
- e. Operational efficiency and assurance that the contractor is operating within the terms of local law, industry regulations, licence permits and Tullow standards
- f. Effective EHS management by the contractor and assurance that it is compliant with conditions of local law, industry regulations, licence permit and Tullow standards

Daily reports on all the activities above need to be delivered to In-Country Project Manager who will report into Tullow.

Final reports detailing the above activities from mobilisation to demobilisation of the survey are also required to be delivered to the In-Country Project Manager within four weeks of completion of the survey. The In-Country Project Manager will then report on the activities to Tullow.

The survey has a planned commencement date of 1st April 2019 and an expected duration of two months.
