

(Provision of PSV Support for drillship “Stena Forth”)

1. BACKGROUND

The Wells Engineering team has confirmed the return of the Stena Forth to support Tullow Ghana for a period of about three-month duration commencing on or around 19th December 2019.

The Wells Team have identified the need for the support of a Platform Supply Vessel to fulfil the identified scope of work detailed below.

The late request from end user for this service provision has meant that the approach to market will, by necessity, be expedited in parallel with seeking approval from CRB.

Your urgent support is requested to support this business need and meet the business needs of the Wells Team.

2. SUMMARY OF SCOPE OF WORK

The platform supply vessel will be used primarily to support offshore drilling operations undertaken by Stena Forth in Jubilee and TEN concessions by:

- the carriage of equipment on deck between Takoradi Port and the offshore drilling location (chemicals, equipment, tools, materials, tubulars, etc),
- providing under deck storage and bulk transfer capability for drilling fluids, dry bulks, fuel and water
- the occasional Adhoc transportation of personnel between shore and asset.
- fulfilling other duties as required, but always within the design intent and capability of the vessel

3. CONTRACT DURATION:

A total of about three months, comprising one-month firm, together with 6 x 2-week options at Charterer’s discretion.
